I can ask to see and change my information.

Special Olympics Medical Form |

CONCUSSION AWARENESS AND SAFETY RECOGNITION POLICY

Objective

It is Special Olympics' intent to take steps to help ensure the health and safety of all Special Olympics participants. All Special Olympics participants should remember that safety comes first and should take reasonable steps to help minimize the risks for concussion or other serious brain injuries.

Defining a Concussion

A concussion is defined by the Centers for Disease Control as a type of traumatic brain injury caused by a bump, blow, or jolt to the head as well as serial, cumulative hits to the head. Concussions can also occur from a blow to the body that causes the head and brain to move quickly back and forth—causing the brain to bounce around or twist within the skull. Although concussions are usually not life-threatening, their effects can be serious and therefore proper attention must be paid to individuals suspected of sustaining a concussion.

Suspected or Confirmed Concussion

A participant who is suspected of sustaining a concussion in a practice, game or competition shall be removed from practice, play or competition at that time. If a qualified medical professional is available on-site to render an evaluation, that person shall have final authority as to the removal or return to play of the participant. If applicable, the participant's parent or guardian should be made aware that the participant is suspected of sustaining a concussion.

Return to Play
